

RESPIRATORY PROGRAM

This program applies to team members that might come in contact with air borne products and fumes that would affect their respiratory system.

If your job requires you to comply with our Respiratory Safety Program your supervisor will notify and train you on how to use respiratory equipment correctly.

If your job does not require you to use respiratory equipment you are NOT authorized to use it at any of the club locations.

If you feel at any time that your position should require you to use respiratory equipment then contact your supervisor immediately and the situation will be evaluated.

If you have any questions about the air quality in your work environment then contact your supervisor.
